Gain skills in:

Critical research techniques: behavioural observations, individual animal IDs, population census surveys, habitat assessments, data entry and GIS mapping.

What you’ll do:

You can support one of our projects or do your own research. Placements, from 1-12 months, can cover a range of topics and locations in both Lilongwe city and Malawian national parks.

Examples of previous research projects:
• Assessing the effectiveness of primate releases
• Factors influencing presence of blue monkeys in naturally fragmented forest patches
• Pre-release enrichment strategies to stimulate natural behaviours in common duiker and genets
• Surveillance for African Swine Fever vectors in pig kholas
• Monitoring elephant populations to investigate population density, herd compositions and diet

Looking to fulfill specific requirements as part of a degree or course?
Check out our internship or student research placement opportunities.
